### Introduction

- **Content**
  - Specifications
  - Working Principles
Two molecular stages in line, which can produce oxygen directly from the air.

Working Power: AC120V 60Hz
Receiver Humidity: 80%
Air Pressure: 60-70 KPa
Temperature: 21-40°C

To ensure safe operation, always turn off the machine before making any disassembly.

Note: The offered offer allows rotated, absorbing, metal sheets to be washed.

(1) Do not disassemble or replace any part of the machine (except for repairs).
(2) Do not replace any part of the machine (except for repairs).
(3) Do not replace the filter of the machine.

When cleaning after washing the sponge and the filter should be dry before use.

Maintenance:
- Regular maintenance
- The machine should be used in dry and clean environment.
The methods of installation:

1. Place the oxygen concentrator in the cabinet with necessary components such as lamps.

2. The power cord is connected to the concentrator and the oxygen concentrator is powered by a step-down transformer. The oxygen concentrator will start to work when it is connected to the switch, and the power indicator will light up.

3. The power switch is used to turn the oxygen concentrator on or off. The concentrator will start to work when it is connected to the switch, and the power indicator will light up.

4. The concentrator should be installed in a well-ventilated area, away from direct sunlight.

5. The concentrator should be installed in a well-ventilated area, away from direct sunlight.

6. The concentrator should be installed in a well-ventilated area, away from direct sunlight.

7. The concentrator should be installed in a well-ventilated area, away from direct sunlight.

8. The concentrator should be installed in a well-ventilated area, away from direct sunlight.
