

## COC-L60 CAT

### LIQUID PHASE 12x40 COCONUT SHELL BASE CATALYTIC CARBON

COC-L60 CAT Activated Carbon (GAC) is manufactured from select grades of coconut shell, and developed through an advanced process, to primarily offer enhanced performance capabilities over coal base catalytic carbon types.

Specifically produced to target Chloramines, Hydrogen Sulfides, and Hydrogen Peroxides, **COC-L60 CAT** provides improved water quality results through the removal of chlorine, TCE, PCE, THM's, Phenols, pesticides, detergents, taste and odor. Offering higher adsorption capacity with extensive micropore structure, the coconut shell base material also offers lower ash content and superior hardness levels. This results in greater bed life longevity and reduced frequency of replacement, decreasing the overall removal and replacement costs.

**COC-L60 CAT** meets AWWA Standard B-600-74 standards, is certified for ANSI/NSF Standard 61, and is Prop. 65 compliant for drinking water applications.
