 DRAWING ID: 003958

Start-up instructions:
 Mount unit under sink, allowing 2" below filter so filter sumps can be removed in the future for filter changes.
 Connect feed water tubing and install faucet and faucet tubing.
 Turn water on, check for leaks. Allow water to run for several minutes
 When filters are new, some air may remain in water for first 20 to 30 gallons, this is OK and doesn't affect water quality.
